## ORTHODONTICS

## Achieving Your Ideal Result

One of the best compliments we regularly receive is that Dr. Hearne, Dr. Taylor and Our Smile Team thoroughly explain every aspect of your orthodontic care before, during and after treatment. We describe our process as **Bio-Cosmetic Orthodontics** which comprehensively addresses the following Eight Treatment Principles; Proper Tooth Alignment, Functional Occlusion (Bite), Tempo-Mandibular Joint (TMJ) Health, Periodontal (Gum) Health, Airway Health, Proper Smile and Facial Esthetics, Ideal Tooth Form and Pathology Screening. We invite you to enjoy our **Results Guide** which further explains why these principles are important and actual examples of how they will help you to achieve your ideal result.

Sincerely,

Thomas Taylor     S. Hearne

# BIO-COSMETIC ORTHODONTICS

## 1. Tooth Alignment

**Ideal Tooth Alignment or "Straightening the Teeth" places them into the proper arch form as seen above. Aligned teeth are both more esthetic and functional.**

## 2. Functional Bite

**"Fixing the Bite" is achieved by strategically fitting the maxillary and mandibular teeth together, as shown.**

**A functional bite, with properly aligned teeth, directs the chewing forces vertically through the teeth, bone, and gums. This is the most important factor in preventing traumatic tooth wear or premature periodontal breakdown over your lifetime.**

### 3. Jaw Joint Health

Bite correction is also critical to the long term stability and health of your Temporo-Mandibular Jaw Joints (TMJs). Patients with ideal bites and joints, that are seated on their discs in the proper position, are less likely to experience TMJ Pain and Symptoms.

### 4. Periodontal Health

By ideally aligning the teeth and their roots, the **Alveolar Bone** and **Gingival "Gum"** position are also improved. When coupled with bite correction, all of these structures have improved health, function and longevity.

## 5. Airway Health

A healthy airway has 3 main components. First, airway flow is free of obstruction from tonsils or adenoids. Second, the airway must be of sufficient volume; width, length and height. Finally, it must be asymptomatic, meaning any possible obstructions are not contributing to sleep apnea. Proper screening and jaw positioning enables us to improve airway health.

## 6. Smile & Facial Esthetics

The proper positioning of the teeth and jaws in all 3 planes of space is critical during orthodontic treatment because they serve as the foundational support of the soft tissue nose, lips and chin. By placing the teeth and jaws in the correct proportions to one another, facial directed treatment accomplishes the most esthetic smile and face for each individual patient.

## 7. Proper Tooth Form

Teeth need to be the proper shape in order to maximize periodontal health.

Teeth must also be the correct width and length so that the bite fits and functions properly. In addition, by creating the ideal proportional size relative to one another, the most esthetic smile is obtained.

## 8. Pathology Monitoring

Finally, Dr. Taylor and Dr. Hearne monitor any other abnormalities or pathology that may be of concern. When necessary, we may advise additional imaging which we refer to our partners at Beam Readers, the largest collection of Board Certified Dental Radiologists in the World, to evaluate and recommend further follow-up.

BIO-COSMETIC ORTHODONTICS CREATES THE MOST IDEAL ESTHETICS, HEALTH, AND FUNCTION OF THE ENTIRE ORAL SYSTEM THROUGHOUT YOUR LIFETIME !

Unfortunately in Orthodontics, as with any other type of medical treatment, an ideal result can be lost overtime without proper follow-up care. Both Dr. Hearne and Dr. Taylor ensure that your result lasts by utilizing two different types of retainers. The first, is a bonded retainer on the lower anterior teeth which are the most likely to shift or crowd after treatment. When necessary, we also bond a retainer behind the upper front teeth to prevent any space opening.

In addition, every patient receives customized clear retainers with strategic pressure points which fit over the bonded retainers to be worn at night. These plastic retainers also protect the teeth from clenching or grinding. When necessary, we may recommend additional periodontal procedures which will also increase the stability of your result.

Finally, we provide 1 year of retainer checks and lifetime follow up visits as needed included as a part of your comprehensive treatment fee. The only additional fees may be if retainers are lost or broken beyond repair.

# Sample Payment Plans

Upon scheduling your initial examination, you will receive several forms emailed to you from our partners at OrthoFi. By completing this information ahead of time, we can expedite your first visit. OrthoFi will confirm your insurance benefits prior to your appointment allowing you to choose your down payment, monthly payments and payment duration which ensures the most affordable care possible.

## Sample Orthodontic Insurance Benefit

**Smile ORTHODONTICS**

TOTAL TREATMENT COST	\$6,025.00
ESTIMATED INSURANCE COVERAGE	\$1,500.00
PATIENT RESPONSIBILITY	\$4,525.00

OPTIONS: **Metal Brackets**

### Sample Payment Plan

CHOOSE A DOWN PAYMENT TO REDUCE YOUR MONTHLY PAYMENTS

**\$250** (MOST POPULAR) | DISCOUNTS: \$4,208.25

CHOOSE A MONTHLY PAYMENT THAT YOU ARE COMFORTABLE PAYING

**\$142.5** (EXTENDED FINANCING) | DISCOUNTS: \$4275
